

**IN THE SPECIFICATION:**

Please REPLACE paragraph [0026] with the following paragraph:

**[0026]** Also, a clutch (~~not shown~~)50 is intervened between the housing 35 and the driving gear 37. Namely, a spring clutch, which is widely used and is well known, is installed between the housing 35 and the driving gear 37, for selectively delivering the rotational force of the driving gear 37 to the housing 35. Therefore, if a load is provided on the housing 35, the driving gear 37 runs idle. Here, the driving gear 37 is given power for rotation from a predetermined power transferring unit.
